

Techcible

ENTERPRISE SOFTWARE SUITE

Every module your business runs on, in one platform.

Techcible Inc. builds and operates a complete enterprise software suite — ERP, CRM, HR and payroll, finance and accounting, procurement, inventory, property and rental management, real-time audio/video products and AI assistants. All of it is live in production today, and all of it is available to buy outright, licence under your own brand, or subscribe to as a fully managed service.

ABOUT

At a glance

Techcible Inc. builds and operates a complete enterprise software suite — ERP, CRM, HR and payroll, finance and accounting, procurement, inventory, property and rental management, real-time audio/video products and AI assistants. All of it is live in production today, and all of it is available to buy outright, licence under your own brand, or subscribe to as a fully managed service.

40 CORE MODULES	100+ ADMIN SCREENS	6 SHIPPING PRODUCTS	3 MOBILE APPS LIVE	4 LANGUAGES BUILT IN	24×7 MONITORED UPTIME
---------------------------	---------------------------------	----------------------------------	---------------------------------	-----------------------------------	------------------------------------

HOW YOU CAN TAKE IT

Buy it. Licence it. Or just subscribe.

The same battle-tested codebase is offered four different ways, so you can pick the commercial model that fits your business — not the other way round. Every option includes onboarding, data migration support and a maintenance window.

Software as a Service

Fully hosted and managed by us. Per-seat or per-instance subscription, automatic updates, backups, monitoring and support. Go live in days, not quarters.

Source-code licence

Buy the product outright. You get the full source, deployment scripts, Docker stack, database migrations and documentation — deployed on your own servers or cloud account.

White-label & OEM

Your brand, your domain, your app store listings. The platform already runs multiple branded instances from one codebase — colours, logo, copy, locales and feature flags are all configurable.

Custom build on top

Start from the suite and we build your differentiators — new modules, integrations, migrations from legacy systems, or a whole new product using the same proven foundations.

THE CATALOGUE

Products in the suite

Six shipping products, all built on one shared platform — shared authentication, shared reporting, shared payments and a single operations console. Take one, take several, or take the whole stack.

Techcible ERP Suite

The flagship — 40+ modules

A complete, permission-driven back office for any organisation: sell, buy, stock, account, staff, deliver and report — from a single console with role-based access down to each action.

- CRM pipeline: leads, opportunities, deals and activity tracking
- Sales & purchase invoicing, quotations, purchase orders, goods receipts
- Double-entry accounting: account heads, journal entries, tax codes, registers
- Inventory with items, warehouses and stock entries
- HR & payroll: attendance, shifts, leave, salary templates and slips
- Projects, tasks, contracts, assets, visitors and a company desk

Available as SaaS · Source licence · White-label

Rental System

Property & rental management

Everything a landlord, property manager or real-estate operator needs — from the unit register right through to rent collection, arrears chasing and preventive maintenance.

- Properties, blocks, units and owners with a live occupancy dashboard
- Tenants, tenancy contracts, amendments and termination handling
- Automatic rent schedules, payment capture, arrears and rental expenses
- Maintenance: requests to work orders, preventive schedules, contractors
- Rental reporting with auto remarks and vacant-unit asking prices
- Assets & GIS map dashboard with geo-located portfolios

Available as SaaS · Source licence · White-label

Zezu

Live talk & emotional-wellness platform

A full real-time social product: one-to-one and group audio/video, live broadcast rooms, rich chat, a coin economy and an operator payout engine — on Android, iOS and web.

- 1:1 and group calls plus live rooms & broadcasts on LiveKit WebRTC
- Rich chat: media, voice notes, reactions, view-once, AI reply suggestions
- Coin economy: packages, offers, happy hours, unlimited talk passes
- Creator payouts with KYC, earnings breakdowns and redeem windows
- 24-hour stories, face filters and in-call games (Ludo, Chess, Carrom)
- Investor-grade analytics: cohorts, LTV, break-even and daily cockpit

Available as SaaS · Source licence · White-label

Blismate

Dating & social connect

Find your match, date and friends. A safety-first dating app with matching, moderated chat and voice calling, plus the monetisation and admin tooling to actually run it as a business.

- Profile discovery, matching and follow with rich filters
- Safe chat & voice calls with spam detection and screenshot blocking
- Profile verification, verified ticks and under-review workflows
- Monetisation via coins, offers and dynamic payment gateways
- Full moderation console: reports, blocks, bans and audit trails

Available as SaaS · Source licence · White-label

Rashi

Astrology & consultation marketplace

A vertical consumer marketplace: daily astrology content, a verified astrologer directory, paid consultations over chat and call, and the engagement loops that keep users coming back.

- Daily horoscopes, panchang and a full editorial content suite
- Astrologer marketplace with profiles, ratings and availability
- Paid consultations over chat, audio and video with per-minute billing
- Engagement: rewards, streaks, notifications and re-activation drips
- Dedicated admin console and settings hub for the whole vertical

Available as SaaS · Source licence · White-label

Techcible AI Assistant

RAG copilot over your own business data

An AI layer that actually knows your system. It indexes your application code and database schema, then answers questions in plain language — including live-data questions, safely.

- Retrieval-augmented answers over your source code and DB schema
- Read-only text-to-SQL: ask for live numbers, get validated queries
- Streaming responses with bounded conversation memory
- Bring your own model — Claude, Gemini or OpenAI, configured per tenant
- Agent registry, per-user rate limiting and Prometheus metrics
- Local embeddings, so your code never leaves your server

Available as SaaS · Source licence · White-label

WHAT'S INSIDE

The full module map

Every module below is shipped, permission-gated and switchable per tenant. Turn on only what you need today and enable the rest as you grow — no re-implementation, no second vendor.

Sales & CRM

CRM	Leads · Opportunities · Deals · Activities
Customers & Contacts	Customers · Contacts · Profiles · Visitors
Invoicing	Sales invoices · Purchase invoices · Tax & service charges

Finance & Accounting

Accounting	Account heads · Journal entries · Journal lines · Tax codes · Registers
Accounts & Treasury	Cash · Bank · Mobile money · Bank statement reconciliation
Payments	Incomes · Expenses · Salaries · Assets · Loans · Donations · Investments · Reconciliation cron
Finance	Expenses · Incomes · Investments · Loans · Donations · Credits

People & HR

Human Resources	Employees · Designations · Attendance · Shifts · Leave · Leave types · Leave allocations · Payrolls · Salary slips
Time & Workforce	Calendar · Reminders · Meetings · Training sessions
Education	Students · Teachers · Classes · Subjects

Operations

Inventory	Items · Warehouses · Stock entries
Procurement	Quotations · Purchase orders · Goods receipts · Suppliers · Supplier contracts
Projects & Delivery	Projects · Tasks · Contracts · Assets · Company desk
Maintenance	Requests · Work orders · Preventive schedules · Contractors

Property & Rental

Property Register	Properties · Blocks & units · Owners · Occupancy dashboard
Rentals	Tenants · Rent schedules · Rent payments · Rental expenses · Rental reminders · Rental reports

Communication

Chat & Messaging	Rich media chat · Reactions & view-once · Voice notes · AI reply suggestions · Spam detection · WhatsApp & SMS
Voice & Video	1:1 calls · Group calls · Live rooms & broadcasts · Face filters · In-call games · Network-quality metering
Mail & Notifications	Mailboxes · Email templates · SMS templates · Push & VoIP · Per-channel toggles
Collaboration	Notes · Meetings · Statuses & stories · Media library · File uploads

Commerce & Payments

Coins & Wallet	Coin packages · Offers & double credit · Happy hours · Country coin rates · Talk passes · Full coins ledger
Payment Gateways	Pluggable gateways · UPI QR scan-pay · Webhooks & idempotent credit · Currency conversion · Taxes · Receipts
Payouts & Settlement	Per-coin payouts · KYC verification · Earnings breakdown · Redeem windows · Settlement reliability · Payout audit trail

Platform & Admin

Dashboards & Reports	Executive dashboard · Per-module dashboards · Daily cockpit KPIs · Top performers · Accounting registers · Custom report builder
No-Code Builders	Dynamic form builder · Workflow engine · Workflow executions · Dynamic table columns
Security & Access	Users & roles · Permission groups · Passkey / WebAuthn 2FA · Encrypted secrets · Audit logs · Bot protection
Administration	System settings · Company profile · Managed languages · App templates · App versions · Setup wizard
AI & Automation	AI assistant · AI agents registry · Text-to-SQL insights · Automated reminders · Scheduled jobs

UNDER THE HOOD

Advanced capabilities

These are not roadmap items. Every capability below is already implemented, deployed and running in production across our instances.

Multi-tenant, multi-brand

One codebase runs many branded instances — separate domains, logos, colours, locales, feature flags and app-store listings, all from configuration rather than forks.

No-code forms & workflows

Build new data models with the drag-and-drop form builder, then automate them with a visual workflow engine — approvals, notifications and multi-step executions with a full run history.

Passkey & WebAuthn 2FA

Phishing-resistant second factor using device biometrics and hardware keys, alongside password policies, session expiry, forced re-login and device binding.

End-to-end encrypted secrets

API keys and gateway credentials are encrypted at rest and revealed only over an ephemeral ECDH channel after re-authentication — never exposed through the normal API surface.

Real-time everything

A dedicated WebSocket tier with Redis pub/sub pushes balances, messages, call state and dashboard metrics live — with reconnect handling and ticket-based authentication.

Production-grade WebRTC

LiveKit-backed 1:1, group and broadcast calling with adaptive quality, ringtone pre-warm, per-minute billing, minimum-charge fraud control and automatic session settlement.

Pluggable payments

Add or swap gateways from the admin UI — cards, UPI QR scan-pay, mobile money and wallets — with multi-currency conversion, taxes, webhooks, idempotent crediting and a nightly reconciliation cron.

AI you can point at your data

Retrieval-augmented answers over your own code and schema, plus validated read-only text-to-SQL so managers can ask for live numbers in plain language. Local embeddings keep your data in-house.

Observability built in

Prometheus metrics, Grafana service dashboards, structured log retention and a public status page — so you know the system is healthy before your users tell you it isn't.

Multi-language & multi-currency

English, French, Hindi and Kinyarwanda ship out of the box, with a managed-languages console to add more. Country-specific rates, currencies and tax rules are first-class.

Maps & GIS dashboards

Geo-located assets, properties and users plotted on live maps, with segment filters for portfolio and field-operations reporting.

Ships as containers

Docker Compose stack for API, sockets, web, AI service and dependencies, with versioned database migrations, cache-busting builds and one-command deploy scripts per environment.

TECHNOLOGY

A modern, boring-on-purpose stack

Mainstream, well-supported technologies your own team can hire for and maintain — no proprietary runtime, no vendor lock-in.

TypeScript · Node.js · Express · TypeORM · MariaDB · Redis · MongoDB · MinIO · React · Ant Design · Flutter · Python · FastAPI · Qdrant · LiveKit / WebRTC · WebSockets · Firebase · Docker · Nginx · Prometheus · Grafana

BEYOND THE PRODUCTS

Engineering services

The same team that built the suite is available to build, extend, secure and run software for you.

Mobile app development

Native iOS and Android plus cross-platform Flutter — from store listing to release automation, with crash reporting and staged rollouts.

Web application development

React front ends and Node, Python or .NET back ends — progressive web apps, scalable architecture and full QA coverage.

UI/UX & design systems

Research-led product design: wireframes, interactive prototypes, brand identity, usability testing and a reusable design system.

Cybersecurity & audits

Penetration testing, vulnerability assessment, application hardening, compliance support and ongoing security monitoring.

Cloud, DevOps & hosting

AWS, Azure, Google Cloud and private VPS deployments — containerised, auto-scaling, monitored and backed up, with maintenance included.

AR/VR & emerging tech

Immersive experiences with ARKit, ARCore and Unity3D — virtual showrooms, training simulations and mixed-reality applications.

MANAGED CLOUD HOSTING

Hosting plans

Managed hosting only. Platform licensing is quoted separately — talk to us for a combined price covering both.

Starter \$20/mo • 20 GB SSD storage • 2 domain names • Unlimited bandwidth • Free SSL certificate • Email support	Professional \$35/mo • 50 GB SSD storage • 5 domain names • Unlimited bandwidth • Free SSL & CDN • Priority support	Enterprise \$50/mo • Unlimited storage • Unlimited domains • Unlimited bandwidth • Advanced security • 24/7 premium support
